Subject: Submission of Internship Report

Dear Sir,

I am pleased to submit my internship report titled "**Financial Performance Analysis of Rupali Bank PLC**" in fulfilment of the internship requirement of the BBA program, major in Accounting, at Bangladesh University of Business and Technology (BUBT). My internship was undertaken at Rupali Bank PLC, Sadar Road Corporate Branch, Barishal, from 16 June 2026 to 16 September 2026.

The report examines the bank's financial performance during 2021-2025 using published financial information and selected indicators. It also documents the practical responsibilities and professional learning associated with my placement. The financial evaluation concerns the bank as a whole, while the internship discussion relates to my experience at the placement branch.

Thank you for your academic guidance and constructive suggestions. I submit this report for your review and consideration.

Yours sincerely,

Md. Abu Al Kawsar
ID: [withheld]
Intake: 59 | Section: 12

Bangladesh University of Business and Technology (BUBT)

Student's Declaration

I, Md. Abu Al Kawsar, ID [withheld] , Intake 59, Section 12, a student of the BBA program major in Accounting at Bangladesh University of Business and Technology (BUBT), declare that this report titled "**Financial Performance Analysis of Rupali Bank PLC**" is submitted towards the academic requirements of my degree.

The report draws on my internship at Rupali Bank PLC, Sadar Road Corporate Branch, Barishal, from 16 June 2026 to 16 September 2026, and on publicly available information relevant to the financial analysis period of 2021-2025.

I acknowledge responsibility for reviewing the contents, checking the calculations, and identifying the sources used in the report. Information and ideas obtained from external publications have been appropriately cited in this report.

Confidential customer identities, account numbers, and transaction details are excluded. The financial evaluation is based on information suitable for academic presentation.

To the best of my knowledge, this report has not previously been submitted to another institution for the award of an academic degree or qualification.

_____

Md. Abu Al Kawsar

Bangladesh University of Business and Technology (BUBT)
Date: 29 October 2026

Supervisor's Certificate

This is to certify that the internship report titled "**Financial Performance Analysis of Rupali Bank PLC**" has been prepared by Md. Abu Al Kawsar, ID [withheld] , Intake 59, as an integral part of the requirement for the BBA Program from the Department of Accounting at Bangladesh University of Business and Technology (BUBT).

The report has been prepared under my academic supervision and guidance as part of the requirements of the BBA program. It addresses the bank's financial performance during 2021-2025 and the student's internship experience at Rupali Bank PLC, Sadar Road Corporate Branch, Barishal.

In preparing this report, Md. Abu Al Kawsar has dedicated significant time and effort to striving to gain a thorough understanding of practical banking activities. His devotion, sincerity, and modesty were impressive and praiseworthy throughout the internship program. His analytical skills and attention to detail have contributed significantly to the quality of this report. Md. Abu Al Kawsar's commitment to learning and professional growth during his internship has been commendable. I am confident that the knowledge and experience he has gained will be invaluable in his future endeavours.

I wish him success in his future academic and professional pursuits.

_____

Md. Tanim-Ul-Islam
Assistant Professor
Department of Accounting
Bangladesh University of Business and Technology (BUBT)
Date: 29 October 2026

Acknowledgement

First and foremost, I express my sincere gratitude to Almighty Allah for giving me the strength, patience, and opportunity to complete my internship and prepare this report successfully.

I would like to express my deepest appreciation to my academic supervisor, Md. Tanim-Ul-Islam, Assistant Professor, Department of Accounting, Bangladesh University of Business and Technology (BUBT), for his valuable guidance, constructive suggestions, and continuous support throughout the preparation of this report. His academic direction helped me organize my internship experience and financial analysis in a structured manner.

I am also grateful to the management and employees of Rupali Bank PLC, Sadar Road Corporate Branch, Barishal, for providing me with the opportunity to complete my internship in a professional banking environment. I am particularly thankful to **Mr. Prosenjit Bose**, Principal Officer, and **Mr. Khan Nasim Parvez**, AGM, for their cooperation, guidance, and support during my internship period.

My internship experience allowed me to observe and participate in practical banking activities, especially account opening, customer service, KYC documentation, deposit account-related activities, cheque book and ATM card services, and digital banking support. The cooperation of the branch officials and employees made it possible for me to gain practical knowledge that complemented my academic learning in accounting and business.

I am also grateful to the authors, institutions, and official sources whose publicly available publications and financial disclosures provided relevant information for the financial analysis presented in this report.

Finally, I would like to thank my family, friends, classmates, and everyone who supported me directly or indirectly during my internship and the preparation of this report.

Executive Summary

This report evaluates the financial performance of Rupali Bank PLC during 2021–2025 and presents the practical learning gained during an internship at Sadar Road Corporate Branch, Barishal, from 16 June to 16 September 2026. It examines changes in the bank's main financial figures, the relationship between loans and deposits, profitability, asset utilization and operating efficiency. The classified-loan ratio provides supporting information about loan quality.

The study uses standalone financial information from the bank's annual reports. Annual growth rates and familiar ratios are calculated with consistent definitions and explained in plain language. Monetary amounts are presented in BDT million. Return on assets and return on equity use average opening and closing balances. The 2022 inputs are rounded historical figures, and the source copies and calculation basis are identified in the report.

The results show that the bank became larger while its reported profitability weakened. Total assets increased from BDT 665,248.04 million in 2021 to BDT 846,286.18 million in 2025. Deposits increased from BDT 576,430.60 million to BDT 720,622.13 million, and gross loans increased from BDT 380,833.70 million to BDT 512,527.09 million. Net profit after tax reached BDT 543.53 million in 2023 but fell to BDT 49.85 million in 2025, compared with BDT 357.98 million in 2021.

In 2025, the advance-to-deposit ratio was 71.12%, return on average assets was approximately 0.006%, return on average equity was 0.30%, and net profit represented 0.41% of operating income. Operating expenses absorbed 91.19% of operating income. The classified-loan ratio improved from 41.60% in 2024 to 39.05% in 2025, but remained substantially above its recalculated 2021 level of 17.50%. Together, these results indicate weak earnings and continuing pressure from problem loans despite balance-sheet growth.

The report recommends stronger loan monitoring and recovery, closer attention to the income earned from assets, careful management of funding and operating costs, and continued improvement in customer documentation and service processes. The internship strengthened practical understanding of account-opening procedures, cheque-related services, account statements and digital-service support. Overall, the report connects straightforward financial evidence with recommendations and professional learning.

CHAPTER 1
Introduction

1.1 Introduction

A bank's financial performance reflects how it obtains funds, uses those funds and manages the costs of its activities. Deposits provide an important source of funding, while loans and other assets support income generation. The final profit depends on the income earned and the expenses and charges recognized during the year. A useful evaluation therefore considers these financial relationships together.

Growth in business size is one part of performance. An increase in assets or deposits shows that the bank has become larger, but it gives limited information about the profit earned from that expansion. Comparing growth with profitability and efficiency helps readers understand whether larger operations are accompanied by stronger financial results. This distinction is central to the analysis in this report.

This report evaluates Rupali Bank PLC during the five financial years from 2021 to 2025. The analysis follows four principal dimensions: liquidity, profitability, asset utilization and operating efficiency. Growth rates describe changes in the main financial figures. The classified-loan ratio supplies supporting information about loan quality and helps place the lending and earnings results in context.

The report also presents the learning gained during an internship at Sadar Road Corporate Branch, Barishal. The financial evaluation uses published information for the bank as a whole. The internship discussion describes supervised responsibilities and practical learning at the placement branch. Together, these components connect financial statement analysis with an understanding of routine banking work.

1.2 Background of the Study

Banks bring together customers who place funds in accounts and customers who require financing. They also provide payment, account and other financial services. These activities create several connected financial flows. Deposits and other funding carry costs, while lending, investments and services provide opportunities to earn income. The difference between income and the relevant expenses contributes to the reported financial result.

The relationship between growth and earnings deserves attention in a bank performance study. Additional lending may expand the income base, but its contribution depends partly on repayment and recovery. Additional deposits can support funding needs, but they also have a cost. Operating expenses must be considered alongside the income generated. These relationships explain why a report needs several related measures rather than a single headline figure.

Annual reports provide the financial statements and notes needed to examine these relationships. Comparisons across consecutive years show the direction and size of changes. Ratios add another perspective by relating one amount to another, such as profit to average assets or operating costs

to operating income. Using a common definition across years makes these comparisons easier to understand.

Rupali Bank PLC was selected because it provided the organizational setting for the internship. Its published reports supply the financial evidence, while branch experience informs the account of practical learning. This connection gives the study a clear subject and purpose. The analysis remains based on bank-wide figures, and the discussion of branch work remains grounded in the activities experienced during the placement.

1.3 Importance of the Study

The study is important because it examines the quality of financial growth as well as the size of the bank. Readers can compare increases in assets, deposits and loans with changes in profit and operating income. This makes it possible to identify situations in which business expansion is accompanied by weaker returns or greater cost pressure. The analysis therefore provides a more useful explanation of performance than a list of annual amounts alone.

The five-year comparison also helps distinguish a consistent movement from a temporary change. One year may show an improvement that is followed by a decline. Comparing the full period gives readers a clearer view of the direction and stability of reported results. The findings provide a basis for recommendations that relate to the evidence presented in the report.

For a BBA student majoring in Accounting, the study develops the ability to read financial statements and connect related figures. It involves checking sources, converting units, calculating ratios and explaining results in understandable language. These activities strengthen the practical use of accounting knowledge. They also encourage careful distinction between the arithmetic of a result and the evidence needed to explain its cause.

The internship adds a practical learning component. Customer assistance, document handling and supervised account services show how accuracy and communication support daily banking work. Reflecting on these tasks helps the student identify professional skills and areas for further development. The report consequently combines financial analysis with an organized account of workplace learning.

1.4 Scope of the Study

The financial component covers Rupali Bank PLC during 2021–2025. It examines total assets, deposits and other accounts, gross loans and advances, operating income, operating expenses, net profit after tax and shareholders' equity. Annual comparisons describe changes in these amounts. The selected ratios relate them to the four principal dimensions, while the classified-loan ratio provides supporting information about the lending portfolio.

The study uses standalone bank information. This means that the financial figures concern the bank itself rather than the combined accounts of the bank and its subsidiaries. Keeping this

reporting basis consistent supports meaningful comparisons across years. The financial statements and their notes are read together when identifying the amounts used in the calculations.

The internship component covers the actual completed period from 16 June to 16 September 2026 at Sadar Road Corporate Branch, Barishal. It includes supervised assistance with account opening, cheque-related services, account statements, document handling and ATM-card or digital-service support. Chapter 5 describes the responsibilities, skills developed and operational observations arising from the placement.

The report focuses on published financial performance and the student's practical experience. Share valuation, a complete regulatory review and comparisons with other banks are outside its scope. The financial conclusions apply to the selected reported figures for the bank. Branch observations provide practical context and remain separate from the explanation of bank-wide financial results.

1.5 Objectives of the Study

1.5.1 General Objective

The general objective is to evaluate the financial performance of Rupali Bank PLC during 2021–2025 through financial comparisons, growth rates and selected banking indicators. The evaluation aims to explain how the bank's main figures changed and how its funding, earnings, asset use and operating costs relate to those changes.

1.5.2 Specific Objectives

The specific objectives are:

1) To examine changes in the bank's principal financial figures over the five-year period.
2) To assess liquidity and the relationship between lending and deposit funding using suitable published measures.
3) To evaluate profitability in relation to assets, equity, and a clearly defined income base.
4) To examine asset utilization and operational efficiency through consistently calculated indicators.

1.6 Study Period and Selected Years

The selected financial years are 2021, 2022, 2023, 2024 and 2025. These consecutive observations allow the report to examine annual movements and compare the first and last years of the period. The five-year sequence gives a broader view than a single-year result. It also makes fluctuations in profit, income and the selected ratios visible.

The closing assets and equity for 2020 are used as opening inputs for the 2021 average-based calculations. These balances help calculate the resources associated with earnings in the first selected year. They serve a supporting calculation purpose; the main financial analysis remains

limited to 2021–2025. Annual growth comparisons in the principal tables begin in 2022, using 2021 as the initial comparison year.

The internship occurred in 2026, after the financial periods examined. Its dates therefore serve a different purpose from the study years. Annual-report information supports the financial analysis, while the completed internship supports the description of duties and professional learning. Keeping these periods distinct helps readers understand the evidence behind each part of the report.

1.7 Methodology of the Study

1.7.1 Research Approach

The study follows a descriptive and analytical approach. The descriptive component presents the bank's organizational background and the internship activities. The analytical component compares published financial amounts and calculates selected indicators. This approach suits the purpose of explaining a single bank's reported performance over a defined period.

The financial analysis uses straightforward arithmetic and consistent definitions. Each result is connected to the question it helps answer, such as how much deposits grew or how much operating income was absorbed by expenses. The discussion focuses on observed relationships. Explanations of the causes of those movements depend on the supporting information available in the reports.

1.7.2 Primary Sources of Information

Primary information comes from internship responsibilities, direct observations and guidance received from supervising officials. It informs the discussion of customer assistance, documentation and routine banking services. The report organizes this information around the tasks experienced and the learning gained from them. This provides a clear account of the placement without overstating the student's responsibilities.

Tasks performed under supervision are distinguished from activities that were only observed. The account of experience emphasizes documentation accuracy, customer communication and the procedures followed when assisting officials. Customer identities, account numbers and confidential transactions are excluded. The purpose is to describe professional learning rather than disclose individual customer information.

1.7.3 Secondary Sources of Data

The bank's annual reports, financial statements and accompanying notes provide the main secondary evidence. Comparative disclosures supply earlier-year amounts where available. Official bank publications support the organizational overview and the description of products and services. The reference list identifies these sources so that readers can distinguish financial evidence from institutional background information.

The financial inputs are drawn from Annual Reports 2021, 2024 and 2025. The 2023 figures are obtained from the comparative information in Annual Report 2024. Rounded historical highlights

in Annual Report 2025 provide the 2022 inputs. This source arrangement allows the five-year series to be assembled from identifiable bank-authored disclosures.

Official PDFs are used where available. Alternative copies of the bank-authored reports are identified where direct official PDFs were not retrievable in the source collection. Section 4.1 and Appendix E explain the access basis and the main data qualifications. The report retains this distinction so that the origin of the financial information remains clear.

1.7.4 Data Collection and Verification

Financial figures were organized in a supporting schedule before the ratios were calculated. The reporting year, statement or note, original unit and reporting basis were checked for each input. Amounts stated in different units were converted to BDT million. This preparation helps prevent comparisons between figures that refer to different entities or use different scales.

The review also checked whether figures represented a year-end balance or an amount earned or incurred during the year. Assets and equity, for example, are balances at a date, while profit relates to a period. Average balances were prepared where required by the chosen formulas. The calculation schedules in Appendix D support the numerical tables in Chapter 4.

Internship information was organized separately by responsibility, learning outcome and observation. This separation keeps operational experience distinct from the financial data. It also allows the report to connect a practical lesson to a particular activity, such as checking account documents or explaining a service requirement to a customer.

1.7.5 Data Analysis

The analysis begins with comparisons of the main financial amounts. Annual growth rates show the percentage change from the previous year, while comparisons between 2021 and 2025 show the movement over the full period. Tables present the values in a common unit. Charts help readers follow the direction of selected changes across the five years.

The report then applies nine familiar indicators. Liquidity is discussed through ADR; profitability through ROA, ROE and net profit margin; asset utilization through loans-to-assets and operating income-to-average assets; and operating efficiency through cost-to-income. Growth rates describe business changes, and the classified-loan ratio provides supporting information about loan quality.

Chapter 3 sets out the definitions and brief formulas. Chapter 4 presents the annual results, calculation examples and interpretation. The indicators are read together to develop the findings in Chapter 6. Recommendations therefore follow the financial issues identified in the analysis, together with the practical observations discussed in the internship chapter.

1.8 Limitations of the Study

The study relies mainly on publicly available annual information. Internal management records and individual borrower files were unavailable. The analysis can therefore describe the reported

movements more fully than it can explain every decision or event behind them. Conclusions are linked to the financial evidence presented in the report.

Annual figures summarize activities over a year or balances at the year-end. They provide less detail than monthly or daily records. Average assets and equity are calculated from opening and closing balances, and the 2022 inputs are rounded historical figures. Chapter 4 explains the important source and reporting qualifications, including the context of reported profit and equity.

The ratios describe financial relationships rather than establish causes by themselves. For example, a falling profit margin identifies lower profit relative to income, but further evidence is needed to explain all contributing factors. This distinction keeps the interpretation clear while allowing the figures to provide useful information about the direction of performance.

The internship discussion concerns one branch and the responsibilities assigned during the placement. It supports an account of practical learning rather than a comparison of all branches. The five-year financial period also defines the time boundary of the study. The report evaluates those selected years without making a forecast of future performance.

CHAPTER 2
An Overview of Rupali Bank PLC

2.1 Background of Rupali Bank PLC

Rupali Bank PLC is a state-owned commercial bank in Bangladesh with a history rooted in the reorganization of banking after independence. This chapter describes its institutional background, corporate identity, stated priorities, principal services, and administrative arrangements. It also introduces Sadar Road Corporate Branch, Barishal, where the internship was undertaken. The discussion provides the organizational context for the financial evaluation of 2021-2025 and the practical experience presented in Chapter 5.

Rupali Bank was established on 26 March 1972 by combining Muslim Commercial Bank Limited, Australasia Bank Limited, and Standard Bank Limited under the Bangladesh Banks (Nationalization) Order, 1972. It operated as a nationalized commercial bank until 13 December 1986. The bank's corporate profile records its incorporation as a public limited company on 14 December 1986 (Rupali Bank PLC, n.d.-a; n.d.-b).

This development brought a corporate organizational form to an institution that retained substantial government ownership. Its historical role helps explain the setting in which commercial banking and public ownership coexist. However, institutional history does not establish financial success; the report evaluates reported outcomes separately through audited information.

Historical facts are distinguished from website information consulted on 7 October 2026. The latter describes the institution at the time of preparation and is not used as evidence of its position at the end of each year within the financial study period.

2.2 Corporate Profile

Table 2.1 presents identifying, administrative, and financial information published on the bank's official Corporate Profile page, consulted on 7 October 2026. The page combines information from different dates. Figures without an explicit reporting date are reproduced as website information and are not treated as audited year-end 2025 balances.

Table 2.1 Corporate Profile of Rupali Bank PLC

Attribute	**Institutional information**
Corporate name	Rupali Bank PLC
Legal form	Public limited company
Institutional classification	State-owned commercial bank
Date of incorporation	14 December 1986

2.3 Corporate Vision

The published vision places emphasis on becoming customers' preferred financial partner and strengthening loyalty by delivering service beyond their expectations (Rupali Bank PLC, n.d.-c). In this report, that statement is paraphrased to explain its institutional meaning.

The vision suggests that the bank seeks continuing relationships rather than isolated transactions. Whether such relationships are sustained depends on customer experience and the bank's capacity to provide dependable services. The statement expresses an aspiration; it does not constitute evidence of customer satisfaction or market leadership.

2.4 Corporate Mission

The mission connects customers' financial progress with lasting relationships, employee career development, ethical conduct, and improvements in technology and service delivery (Rupali Bank PLC, n.d.-c). These themes indicate that service provision depends on both professional capability and organizational resources.

For the present study, the mission provides context for understanding the relationship between customer-facing operations and financial performance. Its implementation would require evidence beyond a published statement. The report therefore considers operational learning and financial outcomes in their respective chapters.

2.5 Core Values and Institutional Priorities

The Vision and Mission page does not set out a separate, clearly labelled list of core values. Customer orientation, ethical responsibility, employee commitment, and innovation are therefore identified here as interpreted themes from that publication, rather than presented as a verified official values statement (Rupali Bank PLC, n.d.-c).

These themes can be considered alongside the practical requirements of banking. Customer orientation calls for clear communication and appropriate assistance. Ethical responsibility requires careful handling of information and adherence to authorized procedures. Staff development supports professional judgement, while innovation involves adapting the way services are delivered.

During an internship, these priorities are relevant to routine activities such as collecting account-opening documents, explaining requirements, and helping customers obtain banking services. Accurate work and responsible communication are practical expressions of professional conduct. This interpretation does not assume that the bank has achieved every stated institutional priority.

2.6 Strategic Objectives

The strategic objectives discussed below are analytical interpretations of the bank's stated direction and published business activities. They are not a verbatim reproduction of an approved strategic plan, and no numerical targets are assigned without a dated official source.

One relevant objective is to maintain a funding base that can support banking activities without placing excessive pressure on liquidity or funding cost. This requires considering the composition and stability of deposits alongside their growth. A second objective is to deploy resources through lending and other earning assets while maintaining appropriate credit assessment and recovery practices.

Another objective concerns the relationship between service delivery and operating efficiency. Improvements in processing, technology, and employee capability may support timely service, but their financial benefit depends on actual use and costs. Institutional reach also matters: lending and account services directed towards different customer groups can broaden access, although the extent of that contribution requires separate evidence.

For this report, these interpretations help connect the institutional overview with the four principal evaluation dimensions: liquidity, profitability, asset utilization and operational efficiency. They guide the questions asked of financial data without predetermining the findings. The later analysis examines whether the selected indicators suggest stronger or weaker financial outcomes over 2021-2025.

2.7 Products and Services

The following discussion groups the bank's offerings by their principal customer purpose. Product names and services reflect the official information consulted during preparation. They do not establish that each offering was available throughout all five years of the financial analysis period.

2.7.1 Deposit Products

The bank's official frequently asked questions describe fixed deposits, monthly instalment-based savings arrangements, and schemes providing periodic income. Its product catalogue also lists deposit pension schemes and savings products directed toward particular customer groups (Rupali Bank PLC, n.d.-g; n.d.-h).

These arrangements meet different financial needs. Transaction-oriented accounts support access to funds and routine payments, while fixed and instalment-based deposits support saving over an agreed period. Periodic-income schemes are designed around customers' interest in receiving income at specified intervals.

For the performance study, deposit growth is important because it changes the scale of available funding. Its financial benefit nevertheless depends on funding cost, maturity characteristics, and

the deployment of the money collected. A larger deposit base cannot, on its own, demonstrate improved profitability.

2.7.2 Loans and Advances

The bank's catalogue includes agricultural and rural credit, CMSME lending, and housing finance. Published examples include crop-related financing, business loans, professional loans, general house-building loans, and house-building arrangements for eligible employee groups (Rupali Bank PLC, n.d.-g).

The range of lending activities indicates that credit is offered for different productive and household purposes. These categories involve different repayment patterns and assessment needs. Their inclusion in the catalogue identifies areas of business activity, but does not establish the size, quality, or return of the corresponding portfolios.

Loans and advances are particularly relevant to the financial analysis because they connect asset growth with earning capacity and deposit funding. Their interpretation must also consider the possibility that recognized income and portfolio expansion may coexist with repayment difficulties. Product descriptions therefore provide context, while audited disclosures provide the basis for evaluating outcomes.

2.7.3 Remittance and Foreign Exchange Services

The bank's remittance information describes arrangements involving overseas exchange companies and banks, with delivery through cash payment, bank-account credit, and specified wallet channels. Its separate SWIFT service page identifies an international financial-messaging service (Rupali Bank PLC, n.d.-i; n.d.-j).

Remittance operations connect senders abroad with beneficiaries in Bangladesh. Their practical significance includes the receipt and processing of payment instructions and the delivery of funds through the applicable channel. International messaging supports communication between financial institutions; it should not be confused with an independent guarantee of payment or settlement.

Foreign exchange and international banking activities require attention to documentation and authorized service arrangements. The bank maintains a separate directory of Authorized Dealer branches (Rupali Bank PLC, n.d.-k). Consequently, the availability of a service at bank level should not be taken to mean that every branch independently undertakes all foreign exchange activities.

2.7.4 Card and Digital Banking Services

Rupali Bank's debit-card page describes ATM cash withdrawal, point-of-sale payments, balance enquiry, and transaction alerts. The Rupali eBank page identifies account-linked functions

including balance checking, mini statements, fund transfers, mobile recharge, and utility payments (Rupali Bank PLC, n.d.-l; n.d.-m).

The bank also describes RupaliCash as its mobile financial service platform, with services such as cash-in, cash-out, money transfer, and mobile recharge. Its publication distinguishes certain existing services from features intended for gradual introduction; proposed features are therefore not assumed to be fully available (Rupali Bank PLC, n.d.-n).

Electronic channels can reduce the need for branch visits for eligible transactions and extend customer access. However, their effect on efficiency depends on actual use, system reliability, support arrangements, and associated costs. This chapter describes the service channels without claiming that they produced measurable improvements during the selected study period.

2.7.5 Other Banking Services

The official service menu includes locker facilities, university admission-fee collection, school banking, and account arrangements for street and working children. It also provides links to forms, charges, and customer information (Rupali Bank PLC, n.d.-g).

These services show that the bank's customer interface extends beyond lending and deposit collection. Some facilitate specific transactions or safekeeping needs, while others address access to formal banking. Their institutional relevance lies in the variety of customer relationships supported.

For this report, service availability is distinguished from service effectiveness. Assessing customer satisfaction, inclusion outcomes, or product-level income would require evidence beyond the information available for the present study.

2.8 Management Hierarchy of Rupali Bank PLC

The bank's public governance pages identify a Board of Directors and senior executive positions, including the Managing Director, Deputy Managing Directors, and General Managers. Its administrative directories identify head-office divisions, divisional and zonal offices, and branches (Rupali Bank PLC, n.d.-d; n.d.-e; n.d.-f). Figure 2.1 organizes these levels into a simplified pyramid to explain the relationship between institutional oversight, executive administration, and service delivery.

Figure 2.1 Simplified Management Hierarchy of Rupali Bank PLC

Source: Author's illustration based on Rupali Bank PLC (n.d.-d; n.d.-e; n.d.-f).

The Board occupies the governance level, while the Managing Director leads executive administration. Deputy Managing Directors and General Managers represent senior executive management. Specialized divisions and divisional or zonal offices provide functional administration and coordination. Branch management directs local operations, supported by officers and other staff involved in processing and customer services.

The pyramid is a functional summary rather than an official organizational chart or a complete list of employee grades. Its width represents a broader operational scope towards the base, not the number of employees at each level. It does not imply that every office follows an identical reporting route; responsibilities and approval powers depend on the applicable delegation of authority.

This structure places the internship within the bank's wider administrative system. Supervised assistance with documents, account services, or cheque-related activities supports branch operations, while final authorization remains with the responsible bank officials. The detailed discussion of the placement and professional learning appears in Chapter 5.

2.9 Branch and Service Network

The official corporate profile lists 587 branches, while the location directory provides entries for individual branches and separate categories for divisional offices, zonal offices, ATM locations, Authorized Dealer branches, and sub-branches. The branch total is presented as a website snapshot consulted on 7 October 2026, rather than a verified year-end 2025 figure (Rupali Bank PLC, n.d.-b; n.d.-f).

A geographically distributed network enables customers to access services through local offices. Electronic channels complement that physical presence by providing additional ways to perform eligible transactions. Branches and digital services consequently represent related parts of the bank's delivery system.

Network breadth also has financial implications. Maintaining offices requires staff, premises, systems, and administrative expenditure. The contribution of a large network to performance therefore depends on business generated and resources consumed. The number of branches should be viewed as an indicator of institutional reach, not as direct evidence of efficiency or profitability.

2.10 Overview of Sadar Road Corporate Branch, Barishal

The bank's official branch directory identifies "Sadar Road Corp. Barishal" at Sadar Road, Barishal, with branch code 3210 (Rupali Bank PLC, n.d.-f). This branch served as the student's internship placement from 16 June 2026 to 16 September 2026, as confirmed by the internship completion certificate supplied for the report.

The placement information identifies Mr. Prosenjit Bose, Principal Officer, as an official who provided internship guidance and Mr. Khan Nasim Parvez, Assistant General Manager, as a branch official associated with the placement. These details describe the internship setting and are not presented as a current public staff directory.

Practical exposure centered on customer assistance and supporting documentation. The activities identified for the internship chapter include account opening, cheque requisition, cheque delivery, cheque issuance-related assistance, client account statements, document scanning, and data entry or information editing. The student's contribution is understood as supervised assistance; authorization and final processing remain responsibilities of the relevant bank officials.

This setting offers a basis for understanding how accurate information, organized records, and clear communication support routine banking services. The detailed account of duties and professional development is reserved for Chapter 5. Branch-level deposits, earnings, staffing totals, and credit performance are not reported here because verified figures have not been supplied.

CHAPTER 3
Conceptual and Analytical Framework of Bank Performance Evaluation

3.1 Understanding the Financial Statements

This chapter develops the conceptual and analytical basis for the financial evaluation in Chapter 4. It explains the figures used, the four principal dimensions and the relationships between the selected indicators. The aim is to make the calculations understandable before the numerical results are discussed. The same framework supports the findings and recommendations in Chapter 6.

The statement of financial position shows assets, liabilities and shareholders' equity at a particular date. Assets represent the resources reported by the bank, including loans and investments. Liabilities include obligations such as customer deposits. Equity is the balance remaining after liabilities are deducted from assets. These categories help explain both the size of the bank and the way its activities are financed.

The income statement shows income, expenses and profit for the financial year. Its figures describe activity over a period rather than a balance at one date. Interest expense, operating expenses, provisions and tax affect the amount retained as after-tax profit. The accompanying notes explain the figures and their reporting basis. IAS 1 provides a general reference for financial statement presentation (IFRS Foundation, n.d.).

The study uses the statements and notes to identify assets, deposits, gross loans, equity, operating income, operating expenses and net profit after tax. Classified loans provide additional information about lending quality. Reading these amounts together connects the bank's resources with its earnings and costs. Section 3.8 defines the inputs used in the calculations.

3.2 Purpose of Ratio Analysis

A financial ratio compares two related amounts. Dividing profit by average assets, for example, relates the earnings of a year to the resources used during that year. Multiplying the quotient by 100 expresses the result as a percentage. This common form makes it easier to describe a relationship and compare it across the selected years.

Ratios are useful when the size of the bank changes. A larger profit amount may partly reflect a larger asset base, while a lower profit amount may reflect weaker earnings from those resources. Comparing both the amount and the ratio provides a clearer interpretation. The same reasoning applies to operating costs relative to income and loans relative to deposits.

The role of ratio analysis in this report is to organize the evidence into understandable relationships. Each ratio answers a defined question, and several ratios are considered together. This approach is consistent with the use of related financial measures in the Financial Soundness Indicators Compilation Guide (International Monetary Fund [IMF], 2019). The report applies the specific definitions presented in Section 3.9.

3.3 Framework of Four Principal Dimensions

The framework follows four principal dimensions: liquidity, profitability, asset utilization and operating efficiency. These dimensions correspond to the objectives of the study. They organize the analysis around funding, earnings, the use of resources and the relationship between costs and income. This structure also makes it easier to connect the numerical results with the final recommendations.

Growth rates provide an overview of the changes in the bank's main financial amounts. They establish whether assets, deposits, loans and profit increased or decreased before the ratios are interpreted. Growth is therefore a comparison method used across the analysis, rather than an additional principal dimension.

The classified-loan ratio supplies supporting information about loan quality. Repayment problems are relevant when considering lending and earnings, so this information is read alongside the four dimensions. The framework consistently treats it as supporting evidence. The discussion in Chapter 4 and the findings in Chapter 6 follow the same distinction.

3.4 Four Principal Dimensions and Supporting Loan Quality

3.4.1 Liquidity

Liquidity concerns the bank's ability to meet payment obligations when they fall due. Customer deposits form an important funding base, while loans represent a major use of funds. Comparing these amounts helps describe the lending position in relation to deposit funding. ADR is the measure used for this purpose in the report.

A higher ADR means that gross loans are larger relative to deposits. A lower ADR means that loans represent a smaller proportion of that deposit base. The movement can be understood by checking whether lending or deposits changed more quickly. Other liquid assets and payment needs also matter for a full liquidity assessment, so the interpretation here focuses on the relationship measured by ADR.

3.4.2 Profitability

Profitability concerns the after-tax earnings generated by the bank. Profit is compared with assets, shareholders' equity and operating income because each base answers a different question. ROA relates earnings to the resources managed, ROE relates them to the owners' funds, and net profit margin relates them to the income generated.

Considering these measures together helps distinguish changes in scale from changes in returns. Profit may increase while assets expand more quickly, producing a lower ROA. Profit margin may also fall when a smaller share of operating income remains after the relevant expenses and charges. Chapter 4 explains these relationships using the bank's actual reported amounts.

3.4.3 Asset Utilization

Asset utilization concerns how the bank uses its resources to support lending and generate operating income. The loans-to-assets ratio describes the share of reported assets represented by gross loans. This provides information about the composition of the asset base. It is read alongside the classified-loan ratio when considering the quality of that lending.

Operating income-to-average assets addresses a different question: how much operating income is generated relative to the resources managed during the year. A growing asset base may produce a lower ratio if operating income grows more slowly or declines. The two asset-utilization measures therefore connect the allocation of resources with their income-generating performance.

3.4.4 Operating Efficiency

Operating efficiency concerns the relationship between operating expenses and operating income. The cost-to-income ratio shows how much operating expenditure is incurred for each BDT 100 of operating income. A lower ratio generally leaves a larger amount before provisions and tax. A higher ratio indicates that operating costs absorb a greater share of that income.

The ratio can change because expenses move, income moves, or both move together. An improvement therefore needs to be read alongside the underlying amounts. If income declines while costs remain similar, the ratio will rise even without a large increase in expenditure. Chapter 4 presents income and expenses together so that this relationship is visible.

3.4.5 Supporting Information on Loan Quality

Classified loans provide supporting information about repayment problems in the lending portfolio. The classified-loan ratio expresses the reported classified amount as a share of gross loans. This allows the reader to assess the scale of the problem in relation to total lending rather than considering the classified amount alone.

This supporting information is relevant to the interpretation of growth and earnings. An expanding loan portfolio and a rising classified share represent different aspects of lending performance. Reading them together gives a clearer picture than either measure alone. Loan quality remains supporting information throughout the framework; the four principal dimensions remain unchanged.

3.5 Reading the Indicators Together

The indicators are connected because the same banking activities affect several financial figures. Loans form part of the asset base and can contribute to income, while deposits help finance those activities. Operating expenses and other recognized charges affect the profit retained. The framework considers these connections when interpreting the reported results.

Growth and profitability may move in different directions. Assets can expand while net profit falls, which reduces the profit earned relative to those resources. Deposits may also increase faster than

loans, lowering ADR. These examples illustrate how changes in the underlying amounts explain changes in a ratio. They are general relationships; Chapter 4 establishes the actual movements for Rupali Bank.

The cost-to-income ratio helps explain the amount of operating income available before provisions and tax. Profit margin then shows the share retained as after-tax profit. The classified-loan ratio adds information about lending quality. Together, the indicators support an organized interpretation of the results and a clear connection to the recommendations.

3.6 Use and Limits of the Framework

The framework is designed to explain the selected reported results for 2021–2025. It combines comparisons of financial amounts with ratios that describe funding, earnings, asset use and operating costs. This common structure helps maintain consistency between the objectives, the analysis and the final findings.

Annual information gives an overall view of performance, but it provides less detail about changes within a year. Ratios also depend on the definitions and balances used in their calculation. The study therefore applies a consistent reporting basis and states the meaning of each measure. Important data qualifications are explained with the relevant analysis in Chapter 4.

The purpose of interpretation is to identify the direction and significance of reported changes. Establishing their causes requires additional evidence. This boundary allows the report to make useful comparisons while keeping its conclusions within the available information. The internship discussion adds practical context without replacing the bank-wide financial evidence.

3.7 Selection of the Nine Indicators

The nine indicators were selected because they address the study objectives and can be calculated from the available annual-report figures. Each has a clearly stated numerator and denominator, or a previous-year comparison base in the case of growth. This makes the calculations transparent and allows readers to follow how the reported amounts produce the results.

The selection covers changes in the main financial figures, lending relative to deposits, earnings relative to resources and income, asset use and operating costs. The classified-loan ratio supplies the supporting lending-quality information. Section 3.9 presents the formulas and short explanations. Chapter 4 contains the numerical tables and worked examples, and Chapter 6 draws the findings from those results.

3.8 Data Definitions and Reporting Basis

The calculations use standalone financial information for Rupali Bank PLC. Monetary amounts are expressed in BDT million so that all years use the same scale. Assets, deposits, loans and equity

are year-end balances. Operating income, operating expenses and net profit relate to the full financial year. This distinction guides the choice between closing and average balances.

Deposits mean the reported line item for deposits and other accounts. Gross loans mean loans and advances before deduction of loan-loss provisions. These definitions are used consistently for ADR and the loans-to-assets ratio. Classified loans mean the amount reported in the bank's applicable classified categories. The same gross-loan base is used for the classified-loan ratio.

Net profit means reported profit after tax, and equity means reported shareholders' equity. ROA and ROE compare that profit with average assets and average equity. Average balances are obtained by adding the opening and closing balances and dividing by two. The 2020 closing balances provide the opening inputs for 2021, while the main study period remains 2021–2025.

Operating income is income after interest expense but before operating expenses, provisions and tax. Operating expenses consist of the bank's reported staff, administrative and related operating costs. These categories determine the meaning of profit margin, income-to-average assets and cost-to-income. Using the same income definition across these measures keeps their interpretation consistent.

Available source precision is used before rounding the displayed results. The 2022 inputs are rounded historical figures, so calculations using them are approximate. Appendix D presents the supporting financial inputs, and Appendix E records the source basis. The worked calculations and necessary reporting qualifications remain in Chapter 4 rather than being repeated here.

3.9 Nine Indicators Used in the Performance Analysis

All nine formulas below express their results as percentages. The average balances and income definitions follow Section 3.8. Detailed calculations appear in Chapter 4.

3.9.1 Growth Rate

Growth rate shows the percentage change from the previous year. It helps compare changes in assets, deposits, loans, profit and equity.

$$\text{Growth rate (\%)} = \frac{\text{Current-year amount - Previous-year amount}}{\text{Previous-year amount}} \times 100$$

3.9.2 Advance-to-Deposit Ratio

ADR shows gross loans for each BDT 100 of deposits. It helps explain the relationship between lending and deposit funding.

$$\text{ADR (\%)} = \frac{\text{Gross loans and advances}}{\text{Deposits and other accounts}} \times 100$$

3.9.3 Return on Assets

ROA shows after-tax profit relative to average assets. It helps assess the profit earned from the bank's asset base.

$$\text{ROA (\%)} = \frac{\text{Net profit after tax}}{\text{Average total assets}} \times 100$$

3.9.4 Return on Equity

ROE shows after-tax profit relative to average shareholders' equity. It helps assess the accounting earnings generated from the owners' funds.

$$\text{ROE (\%)} = \frac{\text{Net profit after tax}}{\text{Average shareholders' equity}} \times 100$$

3.9.5 Net Profit Margin Using Operating Income

Net profit margin shows the after-tax profit retained from each BDT 100 of operating income. It helps assess how much of that income remains as profit.

$$\text{Net profit margin (\%)} = \frac{\text{Net profit after tax}}{\text{Operating income}} \times 100$$

3.9.6 Loans-to-Assets Ratio

This ratio shows the share of reported assets represented by gross loans. It helps describe how much of the asset base is used for lending.

$$\text{Loans-to-assets (\%)} = \frac{\text{Gross loans and advances}}{\text{Total assets}} \times 100$$

3.9.7 Operating Income-to-Average Assets Ratio

This ratio shows operating income relative to average assets. It helps assess income generation from the resources managed during the year.

$$\text{Income-to-assets (\%)} = \frac{\text{Operating income}}{\text{Average total assets}} \times 100$$

3.9.8 Cost-to-Income Ratio

This ratio shows the operating expenses incurred for each BDT 100 of operating income. It helps assess operating efficiency.

$$\text{Cost-to-income (\%)} = \frac{\text{Operating expenses}}{\text{Operating income}} \times 100$$

3.9.9 Classified-Loan Ratio

This ratio shows the share of gross loans reported as classified. It provides supporting information about loan quality when interpreting growth and earnings.

$$\text{Classified-loan ratio (\%)} = \frac{\text{Classified loans}}{\text{Gross loans and advances}} \times 100$$

CHAPTER 4
Financial Performance Analysis of Rupali Bank PLC

4.1 Purpose, Data and Calculation Basis

This chapter evaluates Rupali Bank PLC during 2021–2025 using familiar financial figures and straightforward calculations. The discussion answers three practical questions: how much the bank grew, how effectively it earned income and profit, and how its lending compared with deposits and classified loans.

The analysis uses the standalone bank figures from Annual Reports 2021, 2024 and 2025 (Rupali Bank Limited, 2022; Rupali Bank PLC, 2025, 2026). Amounts are converted to BDT million. The 2022 inputs come from rounded historical highlights in Annual Report 2025, so results using those inputs are approximate. Calculations use available source precision before presentation rounding. For ROA, ROE and income-to-assets, the average is the opening balance plus the closing balance, divided by two; the 2020 closing balances provide the opening inputs for 2021.

Official bank PDFs are used where available. The 2021 and 2025 report copies accessed through Scribd and the 2024 copy accessed through FlipHTML5 are bank-authored reports hosted by alternative services because direct official PDFs were not retrievable in the source collection. These alternatives are identified in References and Appendix E. The accounting-based ratios calculated here follow the definitions stated in this report.

4.2 Growth in Main Financial Indicators

Growth shows how much a financial figure changes compared with the previous year. A positive rate means an increase, while a negative rate means a decrease. The five-year tables begin with 2021 as the comparison base; annual growth is shown from 2022 onward.

$$\text{Annual growth (\%)} = \frac{\text{Current-year amount - Previous-year amount}}{\text{Previous-year amount}} \times 100$$

4.2.1 Total Assets

Table 4.1 Total Assets and Annual Growth

Year	Assets	Annual growth (%)
2021	665,248.04	—
2022	686,727.20	3.23
2023	793,507.84	15.55
2024	806,600.47	1.65
2025	846,286.18	4.92

Source: Rupali Bank annual reports and author’s calculations. Amounts in BDT million; percentages in %.

Total assets increased by 27.21% between 2021 and 2025. The largest annual increase was in 2023. The bank therefore managed a larger asset base at the end of the period, although a larger balance sheet did not produce higher net profit.

4.2.2 Deposits and Other Accounts

Table 4.2 Deposits and Other Accounts and Annual Growth

Year	Deposits	Annual growth (%)
2021	576,430.60	—
2022	588,675.80	2.12
2023	667,317.88	13.36
2024	685,898.29	2.78
2025	720,622.13	5.06

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

Deposits increased by 25.01% over the period. Deposits grew in every year, providing an expanding funding base. In 2025, growth was 5.06%.

4.2.3 Gross Loans and Advances

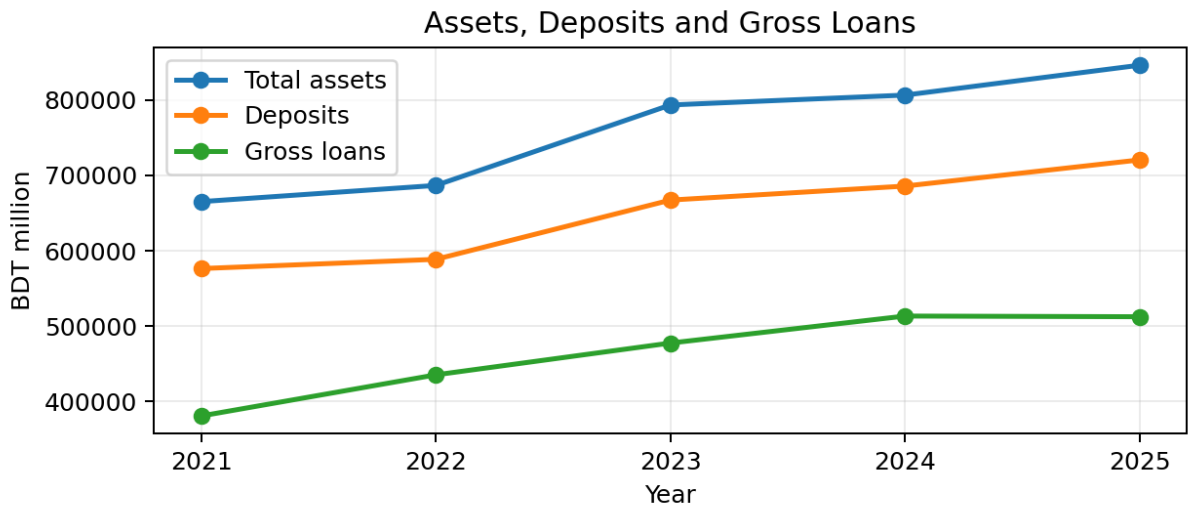

Table 4.3 Gross Loans and Advances and Annual Growth

Year	Gross loans	Annual growth (%)
2021	380,833.70	—
2022	435,400.80	14.33
2023	477,601.16	9.69
2024	513,422.22	7.50
2025	512,527.09	-0.17

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

Gross loans increased by 34.58% between 2021 and 2025. However, loans decreased slightly in 2025 after increasing through 2024. Gross loan growth describes the size of lending; loan quality is examined separately in Section 4.7.

Figure 4.1 Assets, Deposits and Gross Loans

Source: Author's chart based on Tables 4.1–4.3.

4.2.4 Net Profit After Tax

Table 4.4 Net Profit After Tax and Annual Growth

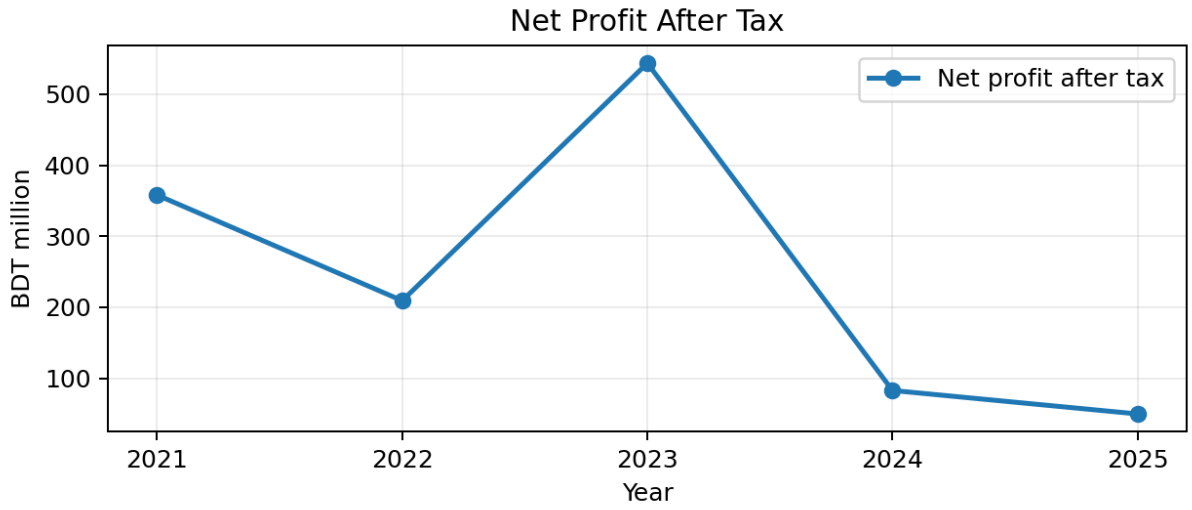

Year	Net profit	Annual growth (%)
2021	357.98	—
2022	209.30	-41.53
2023	543.53	159.69
2024	82.93	-84.74
2025	49.85	-39.89

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

Net profit fluctuated and reached its highest value in 2023. It then fell sharply in 2024 and declined again in 2025. The 2025 profit was 86.07% below the 2021 figure, showing that balance-sheet expansion was accompanied by weaker reported earnings.

Calculation example: asset growth in 2025 = (846,286.18 − 806,600.47) ÷ 806,600.47 × 100 = 4.92%. The same method is used for deposits, loans, profit and equity.

Figure 4.2 Net Profit After Tax

Source: Author's chart based on Table 4.4.

4.2.5 Shareholders' Equity

Table 4.5 Shareholders' Equity and Annual Growth

Year	Equity	Annual growth (%)
2021	16,901.51	—
2022	16,346.70	-3.28
2023	16,632.30	1.75
2024	16,517.34	-0.69
2025	16,633.77	0.70

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

Shareholders' equity was 1.58% lower in 2025 than in 2021, despite a small recovery in the final year. Equity is the reported accounting balance used to calculate ROE; it represents the owners' residual interest in the bank's assets after liabilities.

4.2.6 Operating Income and Operating Expenses

Table 4.6 Operating Income and Operating Expenses

Year	Operating income	Operating expenses
2021	13,754.32	12,567.73
2022	14,921.20	13,853.80
2023	16,287.30	10,828.08
2024	14,652.44	11,473.54
2025	12,233.79	11,156.26

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million.

Operating income is income after interest expense and before operating expenses, provisions and tax. Operating expenses include the bank's reported staff, administrative and related operating costs. Operating income fell from BDT 16,287.30 million in 2023 to BDT 12,233.79 million in 2025. Expenses remained above BDT 11,000 million in 2025, leaving a narrower amount before provisions and tax. This relationship is examined through the cost-to-income ratio in Section 4.6.

4.3 Liquidity: Advance-to-Deposit Ratio

The advance-to-deposit ratio (ADR) compares gross loans with deposits. It shows how much lending corresponds to each BDT 100 of deposits. A higher figure means more lending relative to the deposit base; a lower figure means less. Other liquid assets and payment obligations also matter when assessing the bank's full liquidity position.

$$\text{ADR (\%)} = \frac{\text{Gross loans and advances}}{\text{Deposits and other accounts}} \times 100$$

Table 4.7 Advance-to-Deposit Ratio

Year	Gross loans	Deposits	ADR (%)
2021	380,833.70	576,430.60	66.07
2022	435,400.80	588,675.80	73.96
2023	477,601.16	667,317.88	71.57
2024	513,422.22	685,898.29	74.85
2025	512,527.09	720,622.13	71.12

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

Calculation example for 2025: 512,527.09 ÷ 720,622.13 × 100 = 71.12%. This means approximately BDT 71.12 of gross loans for every BDT 100 of deposits. ADR rose from 66.07% in 2021 to 74.85% in 2024, then declined as deposits grew while gross loans fell slightly in 2025.

4.4 Profitability

Profitability shows how much after-tax profit the bank earned in relation to its assets, shareholders' equity and operating income. These three measures use the same reported net profit but different comparison bases.

Table 4.8 Profitability Ratios

Year	ROA (%)	ROE (%)	Net profit margin (%)
2021	0.055	2.05	2.60
2022	0.031	1.26	1.40
2023	0.073	3.30	3.34
2024	0.010	0.50	0.57
2025	0.006	0.30	0.41

Source: Rupali Bank annual reports and author's calculations. Ratios in %.

ROA is shown to three decimal places because the values are very small. Net profit margin uses operating income as its denominator.

4.4.1 Return on Assets

Return on assets (ROA) shows after-tax profit as a percentage of average total assets. It answers how much profit the bank earned relative to the resources it managed. A higher positive value indicates more profit from the asset base.

$$\text{ROA (\%)} = \frac{\text{Net profit after tax}}{\text{Average total assets}} \times 100$$

Calculation example for 2025: average assets = (806,600.47 + 846,286.18) ÷ 2 = 826,443.32 million. ROA = 49.85 ÷ 826,443.32 × 100 ≈ 0.006%. ROA declined from approximately 0.055% in 2021, showing that reported profit became smaller relative to assets.

4.4.2 Return on Equity

Return on equity (ROE) compares after-tax profit with average shareholders' equity. It indicates the accounting profit earned in relation to the owners' funds. It is not the dividend rate or the return earned by buying the bank's shares.

$$\text{ROE (\%)} = \frac{\text{Net profit after tax}}{\text{Average shareholders' equity}} \times 100$$

Calculation example for 2025: average equity = (16,517.34 + 16,633.77) ÷ 2 = 16,575.56 million. ROE = 49.85 ÷ 16,575.56 × 100 ≈ 0.30%. The decline from 2.05% in 2021 primarily reflects the much lower reported net profit.

4.4.3 Net Profit Margin Using Operating Income

For this report, net profit margin means after-tax profit divided by operating income. It shows the profit retained from each BDT 100 of operating income after operating expenses, provisions and tax. This stated income base is used consistently throughout the report.

$$\text{Net profit margin (\%)} = \frac{\text{Net profit after tax}}{\text{Operating income}} \times 100$$

Calculation example for 2025: 49.85 ÷ 12,233.79 × 100 ≈ 0.41%. Thus, each BDT 100 of operating income produced about BDT 0.41 of reported after-tax profit. The margin was 2.60% in 2021 and 3.34% in 2023, indicating weaker profit retention by 2025.

4.5 Asset Utilization

Asset utilization describes how the bank uses its assets to support lending and generate operating income. The two measures below distinguish the composition of assets from the income earned from them.

Table 4.9 Asset Utilization Ratios

Year	Gross loans / assets (%)	Operating income / average assets (%)
2021	57.25	2.12
2022	63.40	2.21
2023	60.19	2.20
2024	63.65	1.83
2025	60.56	1.48

Source: Rupali Bank annual reports and author’s calculations. Ratios in %.

4.5.1 Gross Loans-to-Total Assets Ratio

$$\text{Loans-to-assets (\%)} = \frac{\text{Gross loans and advances}}{\text{Total assets}} \times 100$$

Calculation example for 2025: 512,527.09 ÷ 846,286.18 × 100 = 60.56%. Loans therefore represented about BDT 60.56 for every BDT 100 of reported assets. The ratio was 57.25% in 2021 and 63.65% in 2024. This measure describes the share of assets represented by lending; it does not show whether those loans are being repaid.

4.5.2 Operating Income-to-Average Assets Ratio

$$\text{Income-to-assets (\%)} = \frac{\text{Operating income}}{\text{Average total assets}} \times 100$$

Calculation example for 2025: 12,233.79 ÷ 826,443.32 × 100 = 1.48%. The ratio declined from 2.12% in 2021. The bank therefore generated less operating income relative to its asset base by the final year, which helps explain why asset growth alone did not improve profitability.

4.6 Operating Efficiency: Cost-to-Income Ratio

The cost-to-income ratio shows the operating expenses incurred for every BDT 100 of operating income. A lower ratio generally leaves more income to meet provisions and tax and contribute to net profit. This calculation uses operating expenses only, excluding interest expense, provisions and tax.

$$\text{Cost-to-income (\%)} = \frac{\text{Operating expenses}}{\text{Operating income}} \times 100$$

Table 4.10 Cost-to-Income Ratio

Year	Operating income	Operating expenses	Cost-to-income (%)
2021	13,754.32	12,567.73	91.37
2022	14,921.20	13,853.80	92.85
2023	16,287.30	10,828.08	66.48
2024	14,652.44	11,473.54	78.30
2025	12,233.79	11,156.26	91.19

Source: Rupali Bank annual reports and author’s calculations. Amounts in BDT million; percentages in %.

Calculation example for 2025: 11,156.26 ÷ 12,233.79 × 100 = 91.19%. The bank spent approximately BDT 91.19 in operating expenses for each BDT 100 of operating income. The remaining BDT 8.81 was before provisions and tax. The ratio improved to 66.48% in 2023 but then rose, indicating a much narrower operating surplus by 2025.

4.7 Loan Quality: Classified-Loan Ratio

Classified loans are loans reported by the bank in the applicable classified categories, indicating repayment or recovery problems under the relevant rules. The classified-loan ratio compares that amount with gross loans. A higher ratio means a larger share of lending is classified, while a lower ratio indicates a smaller reported share.

$$\text{Classified-loan ratio (\%)} = \frac{\text{Classified loans}}{\text{Gross loans and advances}} \times 100$$

Table 4.11 Classified Loans and Classified-Loan Ratio

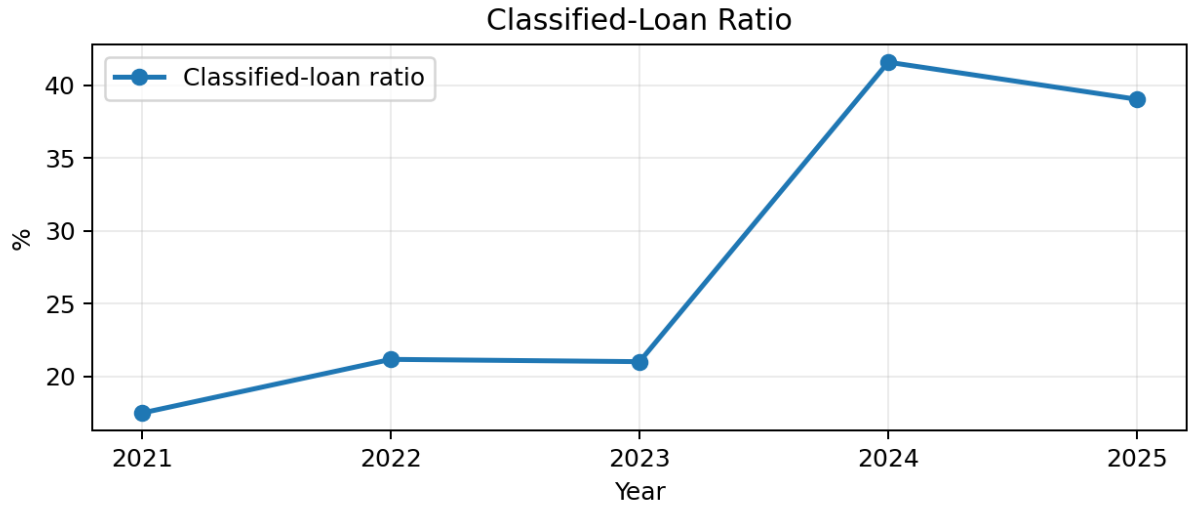

Year	Classified loans	Gross loans	Classified ratio (%)
2021	66,664.90	380,833.70	17.50
2022	92,247.60	435,400.80	21.19
2023	100,437.70	477,601.16	21.03
2024	213,578.10	513,422.22	41.60
2025	200,150.31	512,527.09	39.05

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

The 2021 ratio is recalculated as 17.50% from classified loans and gross loans used here; the annual report separately presents 18.84%. The recalculated series uses one consistent denominator. The 2022 inputs are rounded historical figures.

Calculation example for 2025: 200,150.31 ÷ 512,527.09 × 100 = 39.05%. Approximately BDT 39.05 of every BDT 100 of gross loans was therefore classified. The ratio increased sharply to 41.60% in 2024 and declined in 2025, but remained much higher than in 2021. The decline in the final year is an improvement in the reported ratio; the remaining classified share still requires close recovery attention. These figures show the movement, but do not identify its causes by themselves.

Figure 4.3 Classified-Loan Ratio

Source: Author's chart based on Table 4.11.

4.8 Overall Summary

Table 4.12 Summary of Financial Performance: 2021 and 2025

Indicator	2021	2025
Total assets	665,248.04	846,286.18
Deposits	576,430.60	720,622.13
Gross loans	380,833.70	512,527.09
Net profit after tax	357.98	49.85
ADR (%)	66.07	71.12
ROA (%)	0.055	0.006
ROE (%)	2.05	0.30
Net profit margin (%)	2.60	0.41
Loans-to-assets (%)	57.25	60.56
Income-to-assets (%)	2.12	1.48
Cost-to-income (%)	91.37	91.19
Classified-loan ratio (%)	17.50	39.05

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million; percentages in %.

The main message is straightforward: the bank's assets, deposits and loans increased over the five-year period, but its net profit and returns weakened. Operating income did not keep pace with the growing asset base, operating expenses absorbed most of that income, and classified loans remained a substantial share of lending. Sustainable improvement therefore requires stronger earnings, careful cost management and better loan recovery alongside growth.

4.9 Limitations of the Simplified Analysis

The chapter evaluates published annual figures rather than monthly transactions or individual borrowers. The 2022 inputs are rounded, and average balances use only opening and closing observations. The figures describe reported accounting performance: the annual reports also disclose loan-provision shortfalls, so profit and equity should be read in that reporting context. This study does not recalculate adjusted profit or equity. These limitations do not change the arithmetic, but they define the scope of the conclusions.

CHAPTER 5
Internship Experience at Rupali Bank PLC

5.1 Placement Details and Duration

I completed my internship at Rupali Bank PLC, Sadar Road Corporate Branch, Barishal, from 16 June 2026 to 16 September 2026. The placement formed part of the requirements of the Bachelor of Business Administration program, majoring in Accounting, at Bangladesh University of Business and Technology. It provided an opportunity to relate classroom learning to the documentation, customer communication, and routine processing involved in branch banking.

My academic supervisor was Md. Tanim-Ul-Islam, Assistant Professor, Department of Accounting, BUBT. At the branch, I received guidance and cooperation from Mr. Prosenjit Bose, Principal Officer, and Mr. Khan Nasim Parvez, Assistant General Manager, together with the officials responsible for the activities in which I assisted.

My work centered on supervised support rather than independent decision-making. It included assistance with account opening, customer information collection, cheque-related services, account statements, document scanning, data entry, information updating, ATM card distribution, and digital service guidance. The responsible bank officials retained authority over verification, approval, system authorization, and final processing.

5.2 Working Experience

The placement introduced me to the relationship between customer requests, supporting documents, recorded information, and authorized service delivery. Although the activities differed in purpose, they shared a need for accurate information and clear communication. A request could require further clarification before it was ready for the responsible officer to process.

Working under supervision helped me understand the limits of an intern's role. I could assist with documentation and explain routine requirements, but questions involving approval, account restrictions, or transactions requiring authorization had to be referred to the appropriate official. Learning when to seek guidance was therefore part of the practical experience.

The following subsections describe the main areas in which I assisted. They explain my contribution and learning without presenting my experience as a comprehensive procedural manual or suggesting that I exercised the authority of a bank officer.

5.2.1 Account Opening

Account-opening assistance was an important part of my internship. Under the guidance of branch officials, I helped customers understand documentation requirements, collected customer information, and assisted with relevant forms. My experience covered the following four types of accounts:

1) Savings Account: I assisted customers with account-opening forms and the collection of supporting information. This work helped me understand the importance of establishing a complete customer record for personal banking services.

2) Current Account: I supported the preparation of forms and related documentation for customers seeking current accounts. I referred unclear or incomplete information to the responsible officer for further guidance.
3) Fixed Deposit Account: I assisted with customer information collection and documentation for fixed deposit accounts, commonly associated with Fixed Deposit Receipts (FDRs). Questions concerning deposit terms or approval were referred to branch officials.
4) Deposit Pension Scheme (DPS): I helped customers with forms and documentation for DPS accounts. I provided routine guidance within my assigned role and referred questions about instalments, scheme terms, or eligibility to the responsible officer.

These activities showed me that each account type requires careful documentation and clear customer communication. Verification and final approval remained the responsibilities of authorized bank officials.

Customers differed in their familiarity with the information requested. Some needed further explanation of particular fields or guidance on which supporting documents to provide. My role was to communicate the requirements clearly and bring missing or unclear information to the attention of the responsible official. I did not determine eligibility or approve an application independently.

Incomplete documentation was the most significant practical difficulty I encountered. It required patience because a customer's intention to open an account did not always mean that the application was ready for processing. The experience taught me to identify the outstanding information and explain the next step without making promises about approval or completion.

Through this work, I became more attentive to the relationship between forms and supporting records. Information collected at the beginning of a banking relationship may be needed again when later services are requested. Careful assistance at this stage therefore contributes to an orderly process and reduces avoidable uncertainty for both customers and staff.

5.2.2 Cheque Requisition

I assisted with receiving cheque-book applications and helping customers understand the information required for a requisition. My contribution focused on supporting the request and presenting it to the responsible officer for further processing. Where information was incomplete or unclear, I sought guidance rather than assuming what should be entered.

This activity helped me distinguish a customer's request from the bank's authorization to fulfil it. Receipt of an application is only one part of the process. The responsible officials must determine whether the request is appropriate and complete the required checks before further action is taken.

I learned that even a familiar service requires accurate documentation. Clear explanation of the next step helped customers understand why a request might require further attention. It also encouraged me to use precise language when discussing the status of an application.

5.2.3 Cheque Delivery

I supported cheque-book delivery activities under the direction of branch officials. This involved assisting customers with the collection process and helping with the related documentation as instructed. Verification of the recipient and authorization of release remained the responsibility of the relevant bank official.

The experience showed me that delivery is a controlled service activity rather than a simple physical handover. The item must be associated with the appropriate customer, and the necessary records must be completed according to the instructions of the responsible officer. I therefore learned to follow directions carefully and refer uncertainty before proceeding.

Assisting at this stage also improved my awareness of customer communication. Customers needed clear guidance about what was required to collect their cheque books. Providing that guidance within my assigned role helped me become more confident without extending beyond my authority.

5.2.4 Cheque Issuance

My exposure to cheque issuance concerned assistance with the branch's cheque-book issuance process. I supported related documentation and customer guidance under supervision. I did not independently authorize cheque books, sign instruments, or approve payments.

The distinction between requisition, issuance, and delivery became clearer during the placement. Requisition concerns the customer's application, issuance concerns the bank's processing and authorization of the cheque book, and delivery concerns its release to the appropriate recipient. My assistance related to the supporting activities within that sequence.

This experience strengthened my understanding of responsibility in financial services. An intern can contribute to an orderly process, but the authority attached to a banking action must remain with the designated official. Maintaining that distinction was necessary for both accurate reporting of my experience and responsible conduct at the branch.

5.2.5 Client Account Statement Preparation

I assisted with client account statement preparation under the supervision of authorized officials. My role involved supporting the preparation process and helping with information or documentation as directed. Access, authorization, and release of account information remained subject to the officials' responsibility.

This work helped me connect accounting knowledge with the practical use of financial records. An account statement presents information that a customer may use to understand recorded account activity. Its usefulness depends on identifying the appropriate account and ensuring that the requested information is handled carefully.

I also became more aware of confidentiality. Account information should be handled only for the assigned purpose and should not be discussed with unrelated persons. The internship encouraged me to treat information accuracy and appropriate disclosure as connected professional responsibilities.

5.2.6 Document Scanning and Processing

I assisted with scanning and processing documents as assigned by branch officials. The work required attention to whether the electronic copy was readable and whether the document was associated with the correct set of records. Where a document or instruction was unclear, I referred the matter to the supervising official.

The task demonstrated that converting a paper document into an electronic image does not remove the need for careful review. An unclear image or a record placed in the wrong location can make later retrieval more difficult. Supporting documentation therefore requires attention to both content and organization.

This experience improved my patience with work that may appear routine. The value of the task became clearer when I considered that another employee might later need to consult the record. Preparing usable copies was part of supporting continuity in the branch's work.

5.2.7 Data Entry and Information Updating

I assisted with data entry and customer information updating under supervision. My contribution followed the information supplied and the directions of responsible officials. I did not independently alter records, decide whether a change should be accepted, or exercise final system authorization.

The experience highlighted the importance of consistency between source documents and recorded information. A small difference in a name, number, or other identifying detail can require further clarification. I learned to pay attention to the source rather than rely on memory or assume that an unfamiliar entry was correct.

Information updating also showed me that banking records require continuing maintenance. Customers' details may need attention after the initial account-opening stage. The task encouraged a careful working approach in which uncertainty is resolved with the responsible officer before the work is finalized.

5.2.8 ATM Card and Digital Banking Support

I assisted with ATM card distribution and provided customer guidance concerning digital banking services under the direction of branch officials. My contribution focused on helping customers understand routine information and directing questions to the appropriate staff member when further support was needed.

This work showed me that access to a service does not always mean that a customer is comfortable using it. Explaining information clearly and allowing the customer time to understand the next step were important parts of the support role. Questions involving technical problems or actions requiring authorization remained with the relevant officials.

The experience reinforced the importance of privacy during customer assistance. Guidance should enable customers to understand a service without encouraging them to disclose confidential credentials. It also helped me recognize that digital banking support combines communication with awareness of the limits of one's technical and procedural knowledge.

5.3 Personal Experience and Reflection

The internship changed my understanding of routine banking work. Before the placement, I mainly considered financial services through accounting concepts and classroom examples. At the branch, I saw how customer communication and supporting records influence whether a request can move through the required process.

My most significant learning arose from assisting customers whose documentation was incomplete. The difficulty was not resolved simply by repeating that a requirement existed. I needed to explain what remained outstanding and seek guidance when I could not determine the appropriate response. This helped me understand the importance of patience, clarity, and professional boundaries.

The placement also made me more aware that the quality of supporting work matters even when the intern does not make the final decision. A readable document, an accurate entry, or a clear explanation can help the responsible officer proceed with greater certainty. My reflection therefore concerns the contribution of careful assistance rather than authority over banking outcomes.

5.3.1 Personal Skills and Professional Development

The work strengthened my attention to detail and sense of responsibility. Account forms, statement-related work, scanning, and data entry required me to consider whether information was complete and consistent. I learned to approach a task with enough care to identify uncertainty before presenting the work for review.

Receiving instructions from different officials also encouraged adaptability. Each activity had its own purpose, and I needed to understand what was expected before assisting. Professional development included accepting feedback and recognizing when additional guidance was more appropriate than attempting an unfamiliar step independently.

The placement provided a practical foundation for future work in accounting or financial services. It improved my appreciation of documentation and internal responsibility, while also showing the areas in which further training would be necessary. My experience was mainly in general banking

support and did not extend to independent credit appraisal, treasury decisions, or financial reporting authorization.

5.3.2 Communication Skills

Customer assistance required me to explain routine requirements in understandable language. Account-opening work was particularly useful because customers varied in their familiarity with banking forms. I learned that an explanation should address the customer's actual question rather than assume that everyone needs the same amount of guidance.

Listening was important when information was missing. Understanding what the customer had already provided helped me explain the remaining requirement more accurately. Where a question was outside my role, I learned to refer it to the responsible officer and avoid giving an answer that had not been confirmed.

These interactions improved my confidence in professional communication. They also taught me to distinguish helpful guidance from a commitment that I was not authorized to make. Courtesy and accuracy were most effective when used together.

5.3.3 Problem-Solving Skills

Incomplete customer documentation provided the clearest opportunity to develop practical problem-solving skills. My role was to identify the unresolved part of a request, explain the requirement within my knowledge, and consult the appropriate official when necessary. This was a supervised response to a routine difficulty rather than an independent decision on the customer's eligibility.

The experience encouraged me to break an unclear request into specific points requiring attention. A customer needed to know what information or document remained outstanding before being able to take the next step. Clear explanation was therefore part of resolving the difficulty, alongside the official's guidance.

I learned that effective problem-solving in a bank includes knowing when to stop and refer a matter. Guessing an answer may appear to save time but can create confusion later. Seeking clarification helped me develop a more disciplined approach to unfamiliar situations.

5.4 Critical Observations and Recommendations

The observations in this section arise from my limited experience as an intern, particularly the difficulty associated with incomplete customer documentation. They are not findings from a formal service audit, customer survey, or branch performance assessment. The recommendations concern practical support for the activities in which I participated.

A useful improvement would be to make routine documentation requirements easier for customers to understand before an application is submitted. A concise checklist, reviewed by the responsible

officials, could identify the documents and information needed for common account types or service requests. This may help customers prepare more complete applications, although its effect would need to be assessed after use.

Guidance should also identify the next step when a request is incomplete. Explaining precisely what remains outstanding is more useful than a general instruction to return with additional documents. A consistent explanation, supported by referral to the appropriate official, could reduce uncertainty without suggesting that an intern or customer-service assistant can approve the request.

The experience with scanning and information updating suggests the value of a short review before supporting work is finalized. Readability, correct association with the relevant record, and consistency with the source information are useful points for such a review. This recommendation reflects the requirements of the tasks; it is not a claim that the branch lacked controls or experienced documented processing failures.

Interns would also benefit from an initial orientation covering assigned duties, confidentiality, supervision, and the matters that require referral. Clear boundaries can help an intern assist confidently while preserving the responsibility of authorized staff. Brief feedback during the placement could further support learning from routine tasks.

Customer guidance for digital services should remain clear and sensitive to differences in familiarity. Assistance can focus on general information and the appropriate support channel, with confidential credentials kept under the customer's control. This is consistent with the communication skills developed during my placement and does not imply that a specific security incident occurred.

Overall, the internship provided practical experience in customer assistance, documentation, and careful information handling. It helped me understand the operational setting of the report and strengthened skills relevant to professional work.

CHAPTER 6
Findings, Recommendations and Conclusion

6.1 Introduction

This chapter brings together the financial results and internship learning. The findings follow the simple measures calculated in Chapter 4, while the operational observations relate to the supervised activities described in Chapter 5.

6.2 Major Findings

6.2.1 Growth Did Not Produce Stronger Profitability

Assets grew by 27.21% and deposits by 25.01% between 2021 and 2025. Gross loans also increased over the full period. Nevertheless, net profit fell from BDT 357.98 million to BDT 49.85 million. The bank's larger size therefore coincided with weaker reported earnings.

6.2.2 Lending Relative to Deposits Declined in 2025

ADR increased from 66.07% in 2021 to 74.85% in 2024 before declining to 71.12% in 2025. The final-year decline reflects deposit growth alongside a small reduction in gross loans. The ratio explains this funding relationship rather than providing a complete assessment of liquidity.

6.2.3 Returns and Profit Retention Were Low

ROA declined from approximately 0.055% to 0.006%, and ROE declined from 2.05% to 0.30%. Net profit margin using operating income fell from 2.60% to 0.41%. These measures consistently show that the bank earned less reported net profit relative to its resources and income by 2025.

6.2.4 Income Generation and Cost Efficiency Weakened

Operating income-to-average assets declined from 2.12% in 2021 to 1.48% in 2025. Although the cost-to-income ratio improved to 66.48% in 2023, it rose to 91.19% in 2025. Most operating income was consequently absorbed by operating expenses before provisions and tax.

6.2.5 Classified Loans Remained a Major Concern

The consistently recalculated classified-loan ratio increased from 17.50% in 2021 to 39.05% in 2025. Its improvement from 41.60% in 2024 was welcome, but the final-year share remained large. Stronger monitoring and recovery remain important for improving the lending portfolio.

6.2.6 Internship Learning Emphasized Accuracy and Service

The internship developed practical understanding of account opening, cheque-related services, account statements, document handling and ATM-card support. Accurate forms, complete documentation, confidentiality and clear communication were central to routine service. These observations concern the placement branch and complement the bank-wide financial analysis.

6.3 Recommendations

6.3.1 Strengthen Loan Monitoring and Recovery

Management should maintain regular follow-up of overdue accounts, review recovery progress and prioritize practical action on classified loans. Credit assessment and documentation should remain careful before new lending. The high classified-loan share makes recovery an important priority alongside growth.

6.3.2 Improve Earnings from Existing Assets

The bank should review whether its lending, investments and service activities generate income that adequately covers their costs. Better recovery of amounts due and effective use of existing resources can support earnings. Asset expansion should be assessed together with income generation and profit, rather than treated as a sufficient performance achievement.

6.3.3 Manage Funding and Operating Costs Carefully

Funding decisions should consider the cost and stability of deposits as well as lending needs. Operating expenditure should be reviewed against service output and income. Process improvements can help control avoidable costs while preserving staff effectiveness, customer service and essential controls.

6.3.4 Monitor a Small Set of Clear Indicators

Regular performance reviews can track asset, deposit, loan and profit growth together with ADR, ROA, ROE, profit margin, cost-to-income and the classified-loan ratio. Definitions and reporting bases should remain consistent so that managers and readers can understand what has changed.

6.3.5 Improve Documentation and Customer Guidance

At the branch level, clear checklists for account-opening documents, orderly record handling and understandable instructions can reduce incomplete submissions and repeat visits. Continued staff guidance on customer communication and digital-service assistance would support reliable service.

6.3.6 Provide Structured Internship Orientation

A brief orientation on confidentiality, documentation requirements, daily responsibilities and escalation procedures would help interns understand their role. Supervised rotation and feedback can connect academic learning with practical banking processes.

6.4 Conclusion

Rupali Bank PLC expanded its balance sheet during 2021–2025, but the simple financial measures show that earnings did not strengthen with that expansion. Low returns, a narrow operating surplus and a large classified-loan share were the main weaknesses identified. The results support greater attention to loan quality, income generation and operating costs. They are conclusions about the selected reported figures rather than a complete assessment of every regulatory or financial issue.

The internship provided practical experience of banking documentation, customer assistance and supervised service activities. Combined with the financial analysis, it strengthened the ability to interpret annual-report information, calculate familiar ratios and explain the results clearly. The report therefore offers an understandable account of the bank’s selected financial performance and the professional learning gained from the placement.

Undated website sources were consulted on 7 October 2026. The n.d.-a to n.d.-n labels match the in-text citations. The 2023 figures are drawn from the comparative disclosures in Annual Report 2024; a separate Annual Report 2023 is not cited as an independently consulted source.

Appendices

The signed internship documents remain in the preliminary section. Appendices A–C identify their locations. Appendix D provides the inputs needed to reproduce the simple financial calculations, and Appendix E identifies the source basis.

Appendix A University Forwarding Letter

The university forwarding letter appears in the preliminary section under University Forwarding Letter. It requests placement for Md. Abu Al Kawsar and is dated 11 June 2026, reference BUBT-FBE-6179/2026.

Appendix B Bank Internship Placement Letter

The placement letter appears in the preliminary section under Bank Internship Placement Letter. Issued on 16 June 2026, it initially specifies 21 June–21 September 2026. The report follows the actual completed period confirmed by the later completion certificate.

Appendix C Internship Completion Certificate

The signed completion certificate appears in the preliminary section under Internship Completion Certificate. Issued on 22 September 2026, reference SRB/GEN/2026/191(1), it confirms completion from 16 June to 16 September 2026 at Sadar Road Corporate Branch, Barishal.

Appendix D Financial Inputs and Calculation Schedule

D1 Standalone Financial Inputs

Table D.1 Main Financial Inputs

Year	Assets	Deposits	Gross loans	Net profit
2021	665,248.04	576,430.60	380,833.70	357.98
2022	686,727.20	588,675.80	435,400.80	209.30
2023	793,507.84	667,317.88	477,601.16	543.53
2024	806,600.47	685,898.29	513,422.22	82.93
2025	846,286.18	720,622.13	512,527.09	49.85

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million.

Table D.2 Additional Financial Inputs

Year	Equity	Operating income	Operating costs	Classified loans
2021	16,901.51	13,754.32	12,567.73	66,664.90
2022	16,346.70	14,921.20	13,853.80	92,247.60
2023	16,632.30	16,287.30	10,828.08	100,437.70
2024	16,517.34	14,652.44	11,473.54	213,578.10
2025	16,633.77	12,233.79	11,156.26	200,150.31

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million.

The 2022 financial inputs are rounded historical highlights; calculations using those figures are approximate. Other calculations use available original precision before rounding for presentation.

D2 Opening Balances and Average-Based Calculations

Table D.3 Average Assets and Average Equity

Year	Average assets	Average equity
2021	647,897.87	17,476.14
2022	675,987.62	16,624.11
2023	740,117.52	16,489.50
2024	800,054.16	16,574.82
2025	826,443.32	16,575.56

Source: Rupali Bank annual reports and author's calculations. Amounts in BDT million.

The 2020 closing assets of BDT 630,547.70 million and closing equity of BDT 18,050.77 million provide the opening balances for 2021. Average balance = (opening balance + closing balance) ÷ 2. These opening inputs do not extend the main study period.

D3 How to Reproduce the Calculations

Use the input tables above with the formulas in Chapter 4. Annual growth compares one year with the previous year. ADR divides gross loans by deposits; ROA and ROE divide net profit by average assets and average equity; profit margin divides net profit by operating income; cost-to-income divides operating costs by operating income; and the classified-loan ratio divides classified loans by gross loans. Each quotient is multiplied by 100.

Worked example: the 2025 classified-loan ratio is 200,150.31 ÷ 512,527.09 × 100 = 39.05%. Calculations from rounded displayed inputs may differ slightly from results computed from the source precision.

Appendix E Financial Source Schedule

E1 Annual-Report Basis

Annual Report 2021 provides the standalone 2021 statements and 2020 comparative opening balances. Annual Report 2024 provides the 2024 statements and 2023 comparative information. Annual Report 2025 provides the 2025 figures and historical highlights used for the rounded 2022 inputs. Classified loans follow the bank's loan disclosures and historical financial highlights. Full report titles and access links appear in References.

E2 Source Copies and Units

Official bank PDFs were used where retrievable. Alternative bank-authored report copies are identified in References for 2021 (Scribd), 2024 (FlipHTML5) and 2025 (Scribd) because direct official PDFs were not retrievable in the source collection. Statement figures reported in taka were divided by 1,000,000 to obtain BDT million; historical highlights reported in crore were multiplied by 10.

E3 Consistent Definitions

The calculations use standalone bank figures rather than consolidated group totals. Deposits mean deposits and other accounts; loans mean gross loans and advances. Operating income is after interest expense and before operating expenses, provisions and tax. Net profit means reported profit after tax. The 2021 classified ratio is recalculated at 17.50%, while the annual report separately reports 18.84%; the study retains the same gross-loan denominator throughout.

E4 Scope of Interpretation

The analysis uses the reported accounts and does not adjust profit or equity for disclosed loan-provision shortfalls. Its purpose is a clear comparison of familiar financial measures, not a reconstruction of regulatory capital or a complete compliance review.
